

New Breast Cancer Screening Test! the HALO™ Breast Pap Test

Have 5 minutes?

HALO is a five-minute, FDA approved, noninvasive test that can help determine your risk of breast cancer **years** earlier than a mammogram.

Facts:

1 in 8 women will develop breast cancer in their lifetime

7 of 8 breast cancer patients do NOT have an affected mother, sister or daughter.

70% of women who develop breast cancer have no identifiable risk factors other than age

...and younger women face unique issues:

Breast cancer is the leading cause of death for American women ages 35 to 50.

Younger women with breast cancer have worse outcomes and more advanced disease than older women.

Breast cancer diagnosis within two years of childbirth has nearly 50% mortality.

*Since this is a new test, insurance companies are not **yet** paying for it.
It's \$75 and anything sent to the lab will be billed to your insurance.*

Would you be willing to spend 5 minutes and \$75 extra today to include the Breast Pap as part of your visit today?

_____ Yes _____ No _____ Maybe, But I need more info
